

Header Meta Tags		XOOPS General	
Tag	Example output	Tag	Comment
<{\$xoops_charset}>	UTF-8	<{\$xoops_sitename}>	# Site name
# Output the character set		<{\$xoops_slogan}>	# Site Slogan
<{\$xoops_langcode}>	en	<{\$xoops_pagetitle}>	# Current page title
# Output content language		<{\$xoops_theme}>	# Theme folder name
<{\$xoops_meta_keywords}>	N/A	<{\$xoops_url}> *	# Site URL w/o the "/"
# Output the meta keyword list		<{\$xoops_banner}>	# Site banner
<{\$xoops_meta_description}>	N/A	<{\$xoops_contents}>	# Module contents
# Output the meta description		<{\$xoops_footer}>	# XOOPS footer
<{\$meta_copyright}>	N/A	XOOPS User	
# Output the meta tag copyright		Tag	Comment
<{\$meta_robots}>	index,follow	<{\$xoops_isadmin}>	# If the user is admin?
# Output the W3C robot meta tag		<{\$xoops_isuser}>	# If the visitor is user?
<{\$meta_rating}>	general	<{\$xoops_userid}>	# User id (integer)
Output the meta tag rating		<{\$xoops_uname}>	# User name

Smarty Flow Control / Block

If...Else

<{if \$smarty_variable}>	\$smarty_var could be:
...	
<{elseif}>	\$xoops_isuser
...	
<{else}>	\$xoBlocks.canvas_left
...	
<{/if}>	\$xoops_contents

Foreach Loop

<{foreach item=block from=\$xoBlocks.canvas_left}>
...
<{/foreach}>

\$xoBlocks.canvas_left describes the block location

canvas_left could be replaced by

canvas_left	page_topleft	page_topleft	canvas_right
	page_topcenter		
	page_bottomleft	page_bottomleft	
	page_bottomcenter		

<{\$xoops_contents}> is usually output after page_topcenter

* This tag can be replaced by <{xoAppUrl}>, which basically achieve the same result.

Header Link, Relationship and Other Tags

Tag / Code	Example Usage / Comment
<code><{xoAppUrl backend.php}></code>	<code><link rel="alternate" type="application/rss+xml" title="RSS" href="{xoAppUrl backend.php}" /></code>
<code><{xoAppUrl xoops.css}></code>	<code><link rel="stylesheet" type="text/css" media="screen" href="{xoAppUrl xoops.css}" /></code>
<code><{xoImgUrl style.css}></code>	<code><link rel="stylesheet" type="text/css" media="all" href="{xoImgUrl style.css}" /></code>
<code><{\$xoops_themecss}></code>	<code><link rel="stylesheet" type="text/css" media="all" href="{xoops_themecss}" /></code>
# The above two will output the main stylesheet, the output file is in XOOPS/themes/yourtheme/style.css	
<code><{\$xoops_module_header}></code>	<p># Output the module specific header, it is necessary to include this in your theme to be compatible</p> <pre> <{php}> global \$xoTheme; \$xoTheme->addScript("browse.php?Frameworks/jquery/jquery.js"); # Add built in JQuery \$xoTheme->addScript("js/more.js"); # Add theme script, put it in XOOPS/themes/yourtheme/js/more.js \$this->assign('xoops_module_header', \$xoTheme->renderMetas(null, true)); </php> <{\$xoops_module_header}> </pre>
Include a file into theme	<code><{include file=PATH}></code> or <code><{includeq file=PATH}></code>
Assign a value in Smarty	<code><{assign var=NAME value=SOME_VALUE}></code>
# Example use of Assign: <code><{assign var=theme_name value=\$xoTheme->folderName}><{assign var=theme_name value=\$xoTheme->folderName cat:'/tpl'}></code>	
# Then you could use <code><{includeq file="\$theme_name/tpl.html"}></code>	
# This will include XOOPS/themes/yourtheme_tpl.html or XOOPS/themes/tpl/yourtheme_tpl.html	
Foreachq	<code><{foreachq item=block from=\$xoBlocks.canvas_left}>...</foreach></code>
# Foreachq performs the same function as Foreach, but it is faster (and a little less secure)
